

Milestone Backplan

Plan in one sitting, backward only, from the fixed end. Each step asks: what must be true just before this? Publish the chain.

THE END STATE

The deliverable and its date, one line.

WORKING BACKWARD

What must be true immediately before the end? And before that? One milestone per line, dated, demonstrable, something you could show, not explain.

SPACING CHECK

One visible checkpoint every two to four weeks. First milestone within ten days.

PUBLISHED WHERE

The milestones are for others as much as for you.

RE-PLAN NOTES

Between checkpoints, execute. The plan changes at the checkpoints, on purpose.
