

Friction Forecast Worksheet

Map live frictions to the signatures, rename them out loud, install the design fix. Structure resolves what conversation keeps re-fighting.

THE FRICTION WE'RE SEEING

Described plainly: who, where in the workflow, what it looks like.

THE SIGNATURE IT MATCHES

Vision handoff stall / pace versus depth / the reopened decision / precision as obstruction, or another.

THE RENAME

Said in the room: "this is the ___ friction, not a you-two problem."

THE DESIGN FIX

Handoff Contract, agreed thresholds, decision log, scheduled precision pass, installed where and by when.

THE HONEST FRACTION

What part of this, if any, is not structural, and needs to be handled as what it actually is.
