

Edge-Case Question Cards

Run five cards against any plan before it is locked. Answer in writing, one line each. "Don't know" is a finding.

Volume

What happens when the volume doubles? When it halves? When it arrives all at once?

Ownership

Who owns this after launch, and do they know? Who is the backup?

Pressure

What is the first thing that breaks under time pressure?

Constants

What are we assuming stays constant that might not?

Boundaries

What happens at the edges, the first day, the last day, the handoff between systems or people?

The absence

If the key person is out for two weeks, what stops moving?

The odd input

What is the strangest thing a user, client, or system could feed this, and what happens when they do?

The rollback

If this fails after launch, how do we undo it, and how long does that take?
