SUPPORTS TERTIARY HOW

FOR WHY-WHAT · WHAT-WHY

The AI Precision Companion

A curated prompt pack for delegating precision work to AI: decomposition, checklists, gap reviews, edge cases. **The detail thinking gets generated for you, and you stay the judge.**

THE DRAIN

Producing detail from scratch, task lists, completeness checks, boundary analysis, is the most draining work a tertiary HOW profile does. It is also the category of thinking AI now does cheaply and quickly, which makes producing it by hand an increasingly poor use of your energy.

WHAT THIS TOOL DOES

The pack contains tested prompts for the five precision jobs, each engineered to return output you can review rather than a blank page you must fill. Reviewing detail costs a fraction of generating it; the companion moves you permanently from producer to editor of precision work.

The five prompt families

- | | |
|----------------------|--|
| 1 Decompose | Paste a goal, receive a task breakdown with owners and sequence to edit. |
| 2 Checklist | Describe a deliverable, receive a completeness checklist to prune. |
| 3 Gap review | Paste a draft or plan, receive what is missing, ranked by consequence. |
| 4 Edge cases | Paste a plan, receive the boundary conditions and failure modes to consider. |
| 5 Definition of done | Describe the work, receive checkable criteria to agree with your receiver. |

HOW TO USE IT

- 1 **Use the prompts verbatim first.** They are engineered; personalize only after you know the baseline output.
- 2 **Always edit, never forward raw.** AI output is a strong first pass. Your judgment on what matters is the value-add.
- 3 **Feed context generously.** The more real detail you paste in, the less generic the return.
- 4 **Keep what works.** Save your best edited outputs; they become templates and checklists for Tool 2.

WHAT IT WON'T DO

AI generates plausible detail; it does not know your organization, and it will state wrong things confidently. It replaces the blank-page cost, not the review. Anything high-stakes still deserves a human HOW-primary pass after your edit.
