The Energy Budget Planner

A weekly calendar audit that tags work by orientation and rebuilds the schedule around your energy. **Tertiary work gets placed at peak hours, in limited doses, with recovery adjacent.**

THE DRAIN

Most calendars are built by request order, not by energy, so tertiary work lands wherever it falls, usually at the tired end of days, where it costs the most and gets done worst. The drain is fixed by wiring; the placement is not.

WHAT THIS TOOL DOES

The planner is a thirty-minute weekly pass: every significant block gets tagged by orientation, marked primary, secondary, or tertiary against your profile, and tallied. Tertiary work then gets moved deliberately to high-energy windows, capped in volume, and followed by primary-orientation recovery. The drain stays; the cost per unit drops sharply.

The weekly audit

- | | | |
|---|---------|---|
| 1 | Tag | Every block: is this WHY, WHAT, or HOW work, mostly? |
| 2 | Mark | Against your profile: primary, secondary, or tertiary energy. |
| 3 | Tally | Hours per level. The tertiary number is usually a surprise. |
| 4 | Place | Move tertiary blocks to your peak windows. Never the end of a depleted day. |
| 5 | Recover | Schedule primary-orientation work immediately after every tertiary block. |

HOW TO USE IT

- 1 **Audit last week before planning next.** The tags on real history are honest; the tags on intentions are hopeful.
- 2 **Watch the tertiary trend line.** One heavy week is life. A rising trend is a role drifting away from your wiring.
- 3 **Protect the placement.** A tertiary block moved to peak hours only works if it is defended like a client meeting.
- 4 **Bring chronic overload to the Triage Tree.** The planner optimizes placement. Volume problems need Tool 32.

WHAT IT WON'T DO

Scheduling cannot convert draining work into energizing work; it lowers the price, not the fact, of the drain. And if the tally shows a role that is majority-tertiary, no planner fixes that, it is evidence for a conversation about the shape of the role itself.
