

WHAT-WHY

PRIMARY WHAT · SECONDARY WHY · TERTIARY HOW

How the WHAT-WHY communicates

How your wiring shows up in writing and speech, how each orientation hears it, and the three adjustments that buy the most understanding.

HOW YOU NATURALLY WRITE

You write to move things, and you carry the reason with you. Short messages, active verbs, an ask near the top, and a line of purpose that rallies. Milestones over tasks, direction over destination. What thins out is the floor under the plan: task-level detail, precise numbers, the checks that prove the picture is complete. You trust the gut that has usually been right, and it shows on the page.

Your signature

PRESENT

- + Conclusion-first structure; the ask arrives early
- + Momentum vocabulary: "win", "traction", "let's", "by Friday"
- + A purpose line that rallies: "this gets us to X"
- + Names and dates at high density

CONSPICUOUSLY ABSENT

- Task-level detail and sequence
- Qualifiers, caveats, and exceptions
- Precise figures; yours round up
- The completeness check: "what are we missing?"

HOW YOU LAND

WHAT readers

Hear a native speaker. Your pace energizes them; decisions come easy in your thread.

WHY readers

With you on direction, and grateful for the purpose line. They may push on whether it is the right hill before running up it.

HOW readers

Hear speed without a floor. Round numbers and missing steps read as recklessness, and their questions arrive exactly when you want to be moving.

THE BLIND SPOT

The questions that frustrate you most are the ones protecting you. When a HOW reader asks "what happens when", they are not slowing the work, they are testing whether the plan survives contact. A rally with no floor loses precisely the people who would have caught the failure. Give them one block of detail and they will give you speed.

For HOW readers

Attach the floor. Three lines: the first concrete steps, the real number, the known risks. It reads as respect, and it converts your skeptics into checkers.

For WHY readers

Pause on the frame once. One line, "the problem this solves is X", costs a sentence and prevents the mid-project reopen.

Everywhere

Mark the confidence. "Gut call" and "verified" are different claims; label which one the reader is getting, and your gut earns more trust, not less.
