

REPLACE

SUPPORTS TERTIARY HOW

FOR WHY-WHAT · WHAT-WHY

The Pre-Flight Checklist Library

Reusable completeness checklists for the deliverables you produce again and again. **Completeness stops depending on memory**, the checklist holds the details so you don't have to.

THE DRAIN

Remembering every detail before something ships is exactly the work that drains a tertiary HOW. The cost shows up as the missed attachment, the stakeholder nobody told, the step that was obvious in hindsight. Each miss is small; the pattern erodes trust in otherwise strong work.

WHAT THIS TOOL DOES

A pre-flight checklist replaces the remembering. Built once per deliverable type, from launches to proposals to offsites, it captures every detail that has ever mattered, and every new miss gets added so the same mistake cannot happen twice. Running the list takes minutes and requires no detail instinct at all.

The starter library

- 1 Launch pre-flight
- 2 Proposal and pitch pre-flight
- 3 Event and offsite pre-flight
- 4 Client deliverable pre-flight
- 5 New hire onboarding pre-flight
- 6 Blank checklist builder, for anything you ship repeatedly

HOW TO USE IT

- 1 **Pick your three most repeated deliverables.** Start where the volume is. One checklist per deliverable type.
- 2 **Build from the last three instances.** List what almost got missed each time. That history is the checklist.
- 3 **Run it before every send.** The list is only a replacement if it runs every time, not just when things feel shaky.
- 4 **Add every new miss within a day.** The library compounds. A miss that gets captured is a miss retired permanently.

WHAT IT WON'T DO

A checklist cannot judge quality or catch a problem it has never seen. It retires known misses; it does not generate precision thinking. For novel, high-stakes work, pair it with a HOW-primary review before the deadline, not after.

IN THE KIT

Five starter checklists

Blank checklist builder

Miss-capture log
