

Edge-Case Exposure Matrix

Run all eight questions against any plan before it locks, in one sitting. "Don't know" is a finding, not a pass.

Top 3 exposures found today, carried to the plan owner by name:

QUESTION	ANSWER	EXPOSURE?	OWNER	COUNTER-ACTION	DONE BY
Volume, what happens when it doubles? Halves? Arrives all at once?					
Ownership, who owns this after launch, and do they know? The backup?					
Pressure, what is the first thing that breaks under time pressure?					
Constants, what are we assuming stays constant that might not?					
Boundaries, the first day, the last day, the handoff between systems or people?					
The absence, if the key person is out two weeks, what stops moving?					
The odd input, the strangest thing a user or system could feed this?					
The rollback, if this fails after launch, how do we undo it, how long?
