TEAMS & MEETINGS

FOR INTACT TEAMS

The Team MindPrint™ Map

A one-page visual of the team's profile composition: where energy concentrates, which orientation is uncovered, and whose role is misloaded. **The team's wiring, on one page, in the room.**

THE DRAIN

Teams discuss workload, skills, and personalities, and almost never discuss energy composition, because there has been no shared artifact to discuss it with. The costs stay invisible: an orientation nobody covers, a member whose role sits squarely on their tertiary, a hiring plan about to duplicate the majority wiring.

WHAT THIS TOOL DOES

The map plots every member's profile on a single page: primary and secondary coverage across WHY, WHAT, and HOW, tertiary exposure per person against their actual role, and the gaps. It converts a set of individual assessments into a team-level diagnostic that meetings, staffing, and hiring can point at.

What the map shows

- | | |
|---------------------------|--|
| 1 Coverage | How much primary energy the team holds in each orientation. |
| 2 The gap | The orientation with little or no primary coverage, and what predictably goes missing because of it. |
| 3 Misload | Each member's role demands versus their profile: who is structurally working from their tertiary. |
| 4 The hiring arrow | What the next hire's profile should add, before the resume pile makes the decision instead. |

HOW TO USE IT

- 1 Build it from real assessments.** The map is only as honest as its inputs. Everyone takes the MindPrint™ assessment first.
- 2 Reveal it together, facilitated.** The map lands as liberation or as labeling depending entirely on how it is introduced. Facilitate the first viewing.
- 3 Mark the gap in every planning session.** "Nobody in this room is wired to hold the detail" changes how the plan gets reviewed.
- 4 Refresh on every team change.** One arrival or departure can move the whole energy balance. The map is living, not laminated.

WHAT IT WON'T DO

The map shows energy composition, not competence, a gap means an orientation costs the team energy to cover, not that the team cannot cover it. Never use it to gate assignments or evaluate performance; the moment it becomes a sorting tool, people stop answering the assessment honestly, and the map dies.
